JOURNAL OF THE IRON AND STEEL INSTITUTE

VOLUME 158 1948

SUBJECT INDEX

[References to papers and articles given in full text are indicated by the word (*Paper*) following the page number.

Indexing of Alloy Steels and Other Alloys : In the indexing of alloy steels, carbon and iron are ignored and the alloying elements contained in the steel are arranged in alphabetical order ; for example, all references to nickel–chromium–molybdenum steel will be found under the heading chromium–molybdenum–nickel steel. In the indexing of other alloys, carbon and iron when present, are included in the title ; iron when present is always mentioned first and the other elements follow in alphabetical order, carbon being in all cases mentioned last. Examples : "Iron–silicon–carbon alloys" and "iron–chromium–nickel–carbon alloys."]

AUG 23 1949
CARNEGIE LIBRARY

A.R.L. Spectrographs, characteristics, comparison with Grand Littrow-Quartz, 541
Ablett Prize, awarded to H. Escher, 420
Absorption, on surface of steel wire after acid or electrolytic pickling, 281
Abstracts, 147, 265, 391, 527
  of spectrum analysis, 160 (*Book*)
Accumulator, graphic determination, dilatometric method, 156
Acicular Cast Iron, composition, production, and properties, 152
Acicular Structure, alloy steels, within intermediate transformation range, 539
Acid Electric Furnace Practice, behaviour and effect of elements, 267
Acid Open-Hearth Process, slag–metal reactions, effect of carbon, 397
Acid-Resistant Titanium Enamel, development, 277
Acids :
  corrosion of metals in, inhibiting effect of nicotinic acid, 286
  for pickling operations, economic use, 403
Aciéries du Forez, production of special steels, 538
Aciéries Poldi, production of special steels, 538
Adhesion, electrodeposited coatings, 539
Aetna-Standard Engineering Co., development of non-slip continuous wire-drawing machines, 272
Air :
  oxygenated, use for combustion of blast-furnace gas, 393
  separation of oxygen by liquefaction, developments, 159
  sulphur impurities in, relationship to atmospheric corrosion of metals, 286
Air Compressors, for metallurgical industries, 401
Air-Hardening Steel, properties, effect of initial heating temperature 154
Air Heater, direct-fired, redesign and performance, 414
Aircraft :
  Japanese, armour, metallurgical examination, 287
  Japanese, metallurgical examination, 412, 413
  welded, study of shrinkage, 272
Aircraft Bolts, fatigue strength, effect of methods of manufacture, 539
Aircraft Engines :
  alloys and metals for, properties and manufacture, 283
  Japanese, metallurgical examination, 283, 412, 413
Aircraft Gas-Turbine Wheels, forged high-temperature alloy, bursting tests, 271
Aircraft-Landing-Gear Cylinders, manufacture by cold extrusion 270
Aircraft Parts :
  alloys and metals for, properties and manufacture, 283
  Japanese, metallurgical examination, 283, 412, 413
  steel, centrifugally and statically cast, properties and structure, 283
Aircraft Propeller Blades, chromium–molybdenum–nickel steel, hollow, heat-treatment furnaces, 269
Aircraft Spark Plugs, Japanese metallurgical examination, 287
Alkaline Electrotinning Process, 405
Allegheny Ludlum Steel Corporation :
  gas-fired annealing furnaces for stainless-steel bars and tubes, 270
  tandem cold sheet and strip mill for high-silicon steel, 401
Alloys :
  for aircraft engines and parts, properties and manufacture, 283
  application and developments for mining equipment, 412
  application of oxide and phosphate coatings, 276
  for brazing, soldering, and welding, composition and properties, 273
  characteristics and applications, tables, 287
  cobalt–tungsten, electrodeposition on steel, 406
  cold-rolled, deformation, 535
  crystallization and structure, 285, 412
  damping capacity, 411
  deformation and stresses, study by X-rays, 284
  determination of chromium and manganese, 543
  ferro-, production, 267, 529
  ferro-, production in America, review, 413
  ferro-, production, German practice, 267
  ferromagnetic, interpretation of coercivity, 410
  forgeability, factors affecting, 409
  hardness tests at high temperatures, 280
  heat-resistant, for gas turbines, creep and stress fracture, 280, 281
  heat-resistant, for gas turbines, properties and tests, 281
  heat-resistant, HH and HT types, properties, 281, 537
  heat-resistant, stress-fracture tests, use in study of structure variations, 156
  high-melting-point, casting by investment process, 268
  high-temperature, developments and fabrication, 537
  high-temperature, for gas-turbine buckets, forging, 271
  internal friction, 537
  iron–carbon, powdered, production and transformation, 278
  iron–chromium, passivity, 157
  iron–chromium, magneto-elastic constant, 410
  iron–chromium–nickel, properties, 281
  iron–nickel, after cold-rolling, origin of crystal grains in cubic orientation, 285
  iron–nickel–carbon, production of nodular graphite stucture, 306 (*Paper*)
  iron–platinum, structure, determination, 412
  iron–silicon–carbon, occurrence of carbides, 433 (*Paper*)
  iron–silicon, phase changes, study by magnetic method, 192 (*Paper*)
  iron–silicon, sintered, properties, 536
  lead, electrolytic polishing, 274
  non-ferrous, Japanese specifications, 415
  plasticity, 278
  production by powder metallurgy, structure and properties, 534
  reactions with moisture, thermodynamic study, concept of hydrogen potential 540
  temperature-resistant, applications of powder metallurgy, 407
  tungsten, electrodeposition, 406
  use in cathodic protection of steel in salt water, 157

Alloys—*continued.*
wear-resistant, applications of powder metallurgy, 407
X-ray examination, methods, 284
zinc, electrolytic polishing, 274
Almen Gauges, for measurement of peening intensity, 536
Alumina, activated, for removal of water from petroleum pipe lines and products, 157
Aluminium :
additions to cast and wrought steels, effect on elasticity, 538
diffusion into steel surfaces, German practice, 406
effect on properties of cast iron and steel, 411
phosphate coatings on, production by modified Bonderizing process, 276
properties, comparison with plastic and steel, 539
pure, properties and production, 282
in steel, determination by spectrum analysis, 541
Aluminium-Clad Strip, production, 153
Aluminium Coatings, on metal, patents, 277
Aluminium Impregnation, metals, patents, 277
American Electroplaters' Society :
annual session, proceedings, 404
electrodeposited coatings, investigation of adhesion and porosity, 539
American Iron and Steel Institute :
publicity programme for American iron and steel industry, 413
review of work—1946, 415
American Propeller Corporation, heat-treatment furnaces for hollow chromium–molybdenum–nickel steel aircraft propeller blades, 269
American Society for Testing Materials, radiographic standards for steel castings, 137
Analysis, 157, 541
chemical, for determination of hydrogen in metals, 541
comparison of various methods, applications in Germany, 541
electrographic methods, 543
electroplating solutions, equipment, 274, 275
greases, 401
greases, Sinclair method, 401
mild-steel weld metal, 154
screen, moulding sand, 398
spectrum, 157, 158, 160, 397, 541, 542
spectrum, abstracts of literature, 160 (*Book*)
spectrum, applications in metallurgy, 158
spectrum, for determination of aluminium in steel, 541
spectrum, determination of boron in steel, 158
spectrum, determination of copper in cast iron and steel, 157
spectrum, equipment, developments, and applications, America and Germany compared, 542
spectrum, ferrosilicon, 542
spectrum, low-alloy steel, 158
spectrum, steel, condensed-spark method, 157
spectrum, steel-bath samples, 397
spectrum, use in controlling melting processes and testing of ores, 158
steel, use of mobile laboratory, Ford Motor Co., 158
strains in extrusion and piercing processes, 177 (*Paper*)
stress, beyond elastic range, use of power laws, 535
stress, by X-rays, developments, 535
stresses, application of photo-elasticity, 278
stresses, in extrusion and piercing processes, 177 (*Paper*)
thermodynamical, non-metallic inclusions in mild-steel weld metal, 161 (*Paper*)
X-ray, magnesite bricks, 148
Andrews, L. V., and Riley Stoker Corporation, pulverized-fuel burners, 393
Anemometer, hot-wire, equipment and uses, 281
Anisotropic Metals, theory of yielding and plastic flow, 535
Anisotropy :
magnet steels heat-treated in magnetic field, theory, 537
metals, X-ray examination, 535
Annealing :
blackheart malleable iron castings, 152
coils, electrically heated salt baths for, 531
gaseous, whiteheart malleable cast iron, 269
sheet and strip, batch and continuous methods compared, 532
white iron, for production of malleable cast iron, 152
white iron castings, 269
Annealing Furnaces, gas-fired, for stainless-steel bars and tubes, 270
Anodes :
in cathodic protection of pipe lines, selection and location, 540
magnesium, use in cathodic protection of steel, 286
Anthracite, determination of ash content, 159
Anti-Corrosive Paints :
red lead and zinc yellow, properties, manufacture, and uses, 406
for ships' hulls, 406
Anti-Fouling Compositions :
service tests, 277
for ships' hulls, 406
types and properties, 406
Appleby-Frodingham Works, iron production, 395
Argon :
applications in welding of metals, United Kingdom and American practice, 402
at high pressure, fusion of graphite, 281
Armco Iron, high-temperature oxidation, 286
Armour, Japanese aircraft, metallurgical examination, 287
Arc, welding, electro-physics, 154
Arc Furnace Process. *See* Electric Furnace Process
Armour Plate :
flame-hardening, 532
Japanese, metallurgical examination 412, 413
Arndt, (Franz), manufacture of needles, 271
Arsenic, effect on properties of cast iron and steel, 411
Asbestos, applications in foundries, 530
Ash :
determination of fusibility, 392
in solid fuels, determination of content, 159
Associates, election, 325
Association of Iron and Steel Engineers, D.C. Mill Motor Standardization Committee, report, 400
Athyweld Process, atomic hydrogen welding, 402
Atmospheres :
controlled, use in cleaning metals before enamelling, 274
controlled, use in heat-treatment, 531
controlled, use in restoration of carbon to decarburized steel parts, 399
protective, for heat-treatment furnaces, developments, 269
protective, for sintering metal powders, apparatus for testing, 407
in reheating furnaces, effect on hydrogen absorption and evolution in steel, 530
Atmospheric Corrosion, metals, relationship to sulphur impurities in air, 286
Atmospheric Corrosion Tests, protective paint coatings on steel plates in Belgium, 157
Atomic Energy, applications in metallurgy, 414
Atomic Hydrogen Welding, Athyweld process, 402
Atwood Vacuum Machine Co., heat-treatment equipment for automobile and lawn-mower parts, 532
Automobile Parts, metals for, requirements and processing, 412
Austempering, principles, 270
Austenite :
chromium–nickel, recrystallization, 285
isothermal transformations, 156, 283
residual, relationship between quantity and cooling rate, 285
retained, decomposition at room temperature, 539
retained, transformation by sub-zero cooling, 539
stability in stainless steel, 156, 283
transformation products, classification, 156
Austenite-Martensite Transformations, carbon and nickel steels, study, use of Greninger-Troiano metallographic technique, 156
Austenitic-Ferritic Stainless Steel, behaviour at high temperatures, 281
Austenitic Grain Growth, steel in as-cast and as-forged conditions, comparison, 285
Austenitic Manganese Steel, structure, X-ray diffraction examination of effects of cold-rolling and heat-treatment, 284
Austenitic Steel :
heat-resistant, machining, 273
at high temperatures, effect of grain size, 280
Australia :
coal utilization, 147
production of hollow-drill steel, 151
wire industry, review, 413
Austria, moulding sand, properties and resources, 399
Automobile-Engine Cylinder Blocks, stress-relieving furnaces for, 270
Automobile Parts, heat-treatment equipment, 532
Autumn Meeting, proceedings, 323
Axially Symmetric Problems, in plastic flow of metals under strain, solution, 536

Bainite, formation in chromium–molybdenum steel, effect of tempering temperature, 285
Bainitic Heat-Treatment, for high-speed steel tools, 269
Ball-Bearing Race Rings, heat-treatment, 269
Ball Bearings, silicone lubricants, properties and characteristics, 401
Bar Mills, Colvilles, Ltd., 254 (*Paper*)
Bars :
carbon-steel, cold-drawn and hot-rolled, properties, 411
determination of type, use of mobile laboratory, 158
elastic, lateral vibration under shock tests, 409
hollow, torsion, numerical solution, 535
hot-rolled, for manufacture of ring gears, 271
long, equipment for induction hardening, 532
mild-steel, heating rates in electric furnaces, 531
notched, under tension, plastic yield, two-dimensional theory, 536

Bars—*continued.*
quenching, direct method, 531
stainless-steel, gas-fired annealing furnaces for, 270
test, Jominy, examination of structure during slow cooling, 283
transverse-oscillating, determination of load, 537
uniform, permanent strain due to longitudinal impact, method of prediction, 535
Base Metal :
effect on electrodeposition, 404
stripping copper from, chemical and electrolytic methods, 405
Basic Bessemer Converters, use of oxygen-enriched blast, 396
Basic Bessemer Process, comparison with fixed and tilting open-hearth processes, 397
Basic Coatings, corrosion resistance, methods of determination, 275
Basic Open-Hearth Furnaces :
all-basic type, construction, 150, 396
construction of bottoms, French practice, 149
Basic Open-Hearth Practice, survey of developments, 151
Basic Open-Hearth Process :
history and theory, 151
use of manganese, 397
Basic Open-Hearth Steel, dephosphorization, 151
Basic Process, phosphorus reaction, 494 (*Paper*)
Basic Slag, mineralogy, 397
Bath Tubs, pressing, 271
Bauman Sulphur Print, relationship to segregations in ingots, 411
Bauschinger Effect, in fatigue, 535
Bayrische Motoren Werke, gas-turbine blades, manufacture from austenitic chromium–manganese steel, 533
Bearing Surfaces, on bearings, production by electrodeposition, 275
Bearings :
ball, silicone lubricants, properties and characteristics, 401
bearing surfaces, production by electrodeposition, 275
copper–lead, steel-backed, for internal-combustion engines, manufacture by powder metallurgy, 407
corrosion-resistant packing and wrapping, for storage in tropical climates, 541
heat-treatment, salt-bath equipment, 399
manufacture and developments by powder metallurgy, 407, 534
rolling-mill, materials for, types and behaviour, 400
rolling-mill, metal, synthetic resin, and wood, comparison, 400
Beckert, (Groz), manufacture of needles, 271
Belgium :
atmospheric corrosion tests on protective paint coatings on steel plates, 157
foundries, post-war position, 398
Bend Tests :
impact-, for detection of overheating and temper brittleness of steel, 279
notched-bead slow-, on manganese steels, 155
use in measuring toughness of high-speed steels, 540
weld bead, 408
welds, failures, 156
wire, for detection of defects, 155
Bending Machines, 401
Bentonite :
properties, 152
use in moulding sand, 398
Benzol, distillation, 393
Beryllium, effect on properties of cast iron and steel, 411
Bessemer Converters, use of oxygen-enriched blast, 266, 396
Bessemer Gold Medal :
awarded to W. J. Dawson, 522
awarded to Sir William Larke, 420
awarded to M. Tigerschiöld, 420
Bessemer Process, basic, comparison with fixed and tilting open-hearth processes, 397
Bessemer Steel, for tubes, properties, 539
Bethlehem Steel Co., control equipment for slab-heating furnaces, 530
Bhagavantam-Bhimasenachar Method, determination of elastic constants of refractory materials, 148
Bibliography :
coke consumption in blast-furnaces, factors affecting, 395
damping capacity, measuring and testing, 410
dielectric heating, 415
fatigue properties, cast iron, 536
hot-dip galvanizing, 416 (*Book*)
metals at sub-atmospheric temperatures, properties, 539
oxide films, formation on stainless steels, 541
plating solutions, purification and effect of impurities, 405
powder metallurgy, developments, 407
radiography, equipment, theory and industrial applications, 543 (*Book*)
temper brittleness in steel, 436
Billets :
quenching, direct method, 531
surface defects, mechanical methods of removal, 403
Binders :
clay, in moulding sand, properties and effect, 399
core, properties and applications, 399
Biographies :
Frontispiece ; also to face 160, 288, 416
contributors to Journal, 141, 259, 389, 523
Birlec Salt-Bath Furnaces, 270
Birmingham University, open scholarships in metallurgy, 294
Birtley Pneumatic Separators, for coal and ore, 266
Bits, drill, tungsten-carbide-tipped, behaviour, 392
Black Death, effect on English iron industries, 1348–49, 413
Blades, long, equipment for induction hardening, 532
Blanks, folding during drawing, causes, 271
Blast :
oxygen-enriched, use in Bessemer converters, blast-furnaces and cupolas, 266, 396, 398, 529
oxygen-enriched, use in blast-furnaces and converters, German practice, 395
steam-oxygen, for production of water-gas, 393
Blast-Furnace Gas :
combustion, use of oxygenated air, 393
mixed with fuel oil for firing open-hearth furnaces, 529
Blast-Furnace Plant :
Colvilles, Ltd., 394
economic factors affecting siting and layout, 149
Germany, equipment available for reparations, 159
mechanical equipment for maintenance work, 149
model, Shelton Iron, Steel and Coal Co., Ltd., 149
Blast-Furnace Practice, 149, 394, 528
effect of high top-pressure, 395
new techniques, 149
practical and economic aspects, 395
Blast-Furnace Process :
pig-iron composition and slag-temperature relationships, 149
use of calcium carbide as reducing agent, 395
use of small crushed ores, 528
Blast-Furnace Slag :
composition, 149
use in manufacture of building materials, 528
use in manufacture of cement, plaster, road-making materials, and slag-wool, German practice, 528
Blast-Furnaces :
bells, developments, 395
burdens, relationship with fuel economy in iron and steel plants, 396
charcoal, operation in Sweden, 528
coke consumption, factors affecting (*with bibliography*), 395
coke consumption and output, method of determination, 396
disintegration of iron ore, effect, 396
downcomers, failure, 528
French, statistics, 159
hearth design, 395
hot-blast stoves, Cowper type, thermal efficiency, 395, 528
maintenance and renewals, 149
oxidation zone, methods of increasing, 395
preparation of ores, 265
profiles, design, effect of pre-treatment of burden, 395
profiles, developments, 395
relining, 528
use of oxygen-enriched blast, 395, 529
Blistering, cadmium coatings on soldered steel, causes, 276
Bochumer Verein Plant :
centrifugally cast gun barrels, metallurgical examination, 285
for manufacture of heavy plant, tubes, and tyres, 533
Bogies, railway, materials and manufacture, 267
Bohemia, iron ore, geology, 391
Boiler-Fan Shafts, repair by electrodeposition of nickel, 405
Boilers :
feed-water, electronic treatment for scale prevention, 414
fired with pulverized fuel, control systems, 527
for gaseous or pulverized fuels, 401
high-pressure, air-operated automatic control systems for, 392
maintenance, 272
pulverized-coal-fired, design and development, 401
pulverized-fuel firing, 393
Bolts :
for aircraft, fatigue strength, effect of methods of manufacture, 539
malleable cast-iron, for joints in pipe lines, 152
manufacture, hot- and cold-working methods, 533
Bombs, mass production of cast-steel bodies, 151
Bonderizing Process, modified, for production of phosphate coatings on aluminium, steel, and zinc, 276
Bonding, rubber to metals, 414, 415
Book Notices, 160, 287, 415, 543
Borax, use in wire drawing, 272
Boron :
determination in steel by spectrum analysis, 158
effect on properties of cast iron and steel, 411, 538
Boron Steel, hardenability, effect of carbon, 530
Bragg Method, X-ray examination of alloys and metals, 284
Brake Blocks, railway, determination of surface temperature, use of lead sulphide pyrometer, 266
Brass, electrodeposition on strip, 153

Brass Coatings, methods of removal from iron and steel scrap, 274
Brass Industries, Liège district, historical review, 413
Brazing :
continuous, furnaces and practice, 403
furnace-, equipment and methods, 273
silver-, cast iron, Kolene process, 273
survey of processes, 403
Brazing Alloys, composition and properties, 273
Brazing Furnaces, types and operation, 403
Brenner Dropping Test, for thickness measurement of cadmium and zinc coatings on steel, 275
Brevon Coatings, characteristics and applications, 405
Bright-Plating Processes, 275
British Cast Iron Research Association, research on annealing of white iron for production of malleable cast iron, 152
British Iron and Steel Research Association :
committee organization, 248
corrosion committee, research work, 286
notices of meetings, announcements, and conferences, 144, 262, 389, 524
papers, 81, 96, 99, 219, 229, 236, 347, 463, 494, 496
research in iron production, 149
research on anti-fouling paints for ships' hulls, 406
British Refractories Research Association, research in iron production, 149
British Welding Research Association, steel welding symposium, 154
Brittle Fracture :
mild steel, 327
mild steel, effect of manganese/carbon ratio, 280
mild-steel plates, 280
welded structural steel, causes, 283
Brittle Solids, mechanism of fracture, 538
Brittleness :
temper, steel, 280, 399, 409
temper, steel, detection by impact-bend tests, 279
temper, steel, review (*with bibliography*), 436
temper, steel, etching reagents for detection, 284
Building Materials, manufacture, use of blast-furnace slag, 528
Burners :
gas, high-stability types, developments, 527
for pulverized coal, developments, review of literature, 393
Bursting Tests, forged high-temperature alloy aircraft gas-turbine wheels, 271
Büsselmann Process, for manufacture of permanent moulds, 268
By-Products, recovery, 393

" C " Process, for manufacture of cores and moulds, 268
Cables :
electric, steel sheathing, Hackethal process, 402
steel, protection, use of lead coatings, 276
Cadmium :
electrodeposition, hydrogen embrittlement, 275
in zinc plating, detection by spot tests, 543
Cadmium Coatings :
bright-, production by electrodeposition, 275
on soldered steel, causes of blistering, 276
on steel, thickness measurement, use of Brenner dropping test, 275
Calcium Carbide, use as reducing agent in production of pig iron, theory, 395
Calorific Value, coals and cokes, determination, 158
Calorimetry, application in measurement of iron loss, 280
Canada :
oxy-acetylene cutting technique for manufacture of gun parts, 533
water-gas production, use of steam-oxygen blast, 393
wire industry, history and development, 414
Canite, use in bonding rubber to metal, 415
Capacitrol Circuit, electronic, application to temperature-control and recording instruments, 266
Carbide Dies :
sintered, types and applications, 533
tungsten, use in drawing metals, 533
Carbide Structure, effect on corrosion resistance of steel, 157
Carbides :
cemented, applications, 271
in chromium steels, methods of determination, 543
occurrence in cast iron and iron–silicon–carbon alloys, 433 (*Paper*)
sintered, for dies and cutting tools, preparation, metallography, and applications, 412
Carbon :
behaviour and effect in acid electric furnace practice, 267
control in gaseous carburizing, 399
in cupola iron, control, 267
determination in ferrous alloys and steel by combustion in oxygen, modified method, 158
determination of loss during sintering of powdered iron in hydrogen, 277
effect on cracking of mild-steel weld metal, 154
Carbon—*continued.*
effect on hardenability of boron steel, 530
effect on notch-sensitivity of mild steel, 155
effect on properties of cast iron and steel, 408, 411
effect on slag–metal reactions in acid open-hearth process, 397
in minute quantities of steel, apparatus for determination, 541
pick-up during melting of cast iron, 152
reduction in open-hearth process, use of oxygen, 397
reduction in sintering of powdered iron in hydrogen, effect of temperature, 534
removal from liquid open-hearth steel, mechanism, 451
restoration to decarburized steel parts, use of controlled atmospheres, 399
Carbon–Molybdenum Steel :
properties, effect of manganese, 280
properties and weldability, effect of silicon, 540
Carbon Monoxide, for reduction of iron oxides, apparatus and methods, 395
Carbon–Oxygen Reactions, in liquid iron, 267
Carbon Steel :
annealed, transformations, study, use of iron–carbon diagram, 156
austenite–martensite transformations, study, use of Greninger-Troiano metallographic technique, 156
cold work induced by shot-peening, determination of depth of penetration, 540
for cutlery manufacture, French practice, 282
effect of cold rolling-mill variables, 282
electrolytic polishing, 274
hardness tests, 270
improving machinability, use of sodium sulphite, 150
induction-heated, hardness tests, 538
overheated, structure, micrographic examination, 285
pickling embrittlement, 408
production in oil-fired rotary furnaces, 397
production in side-blown converters, 398
properties, effect of manganese, 280
properties and weldability, effect of silicon, 540
spot welding, 402
Carbon-Steel Bars, cold-drawn and hot-rolled, properties, 411
Carbon-Steel Plates, notched-bar tensile tests, 408
Carbon-Steel Wire, developments in manufacture, 272
Carbonization :
coal, fuel economy, 527
wood, Sikfors Bruk plant, 393
Carburization :
steel, sulphide penetration, 270
effect of chlorides and silicon-bearing materials, 269
gaseous, carbon control, 399
gaseous, steel, 399
gudgeon pins, gas-fired furnaces, 399
liquid, sintered powdered-steel compacts, 399
Carburizing Tests, 269
Carnegie-Illinois Steel Corporation :
construction of all-basic open-hearth furnaces, 150, 396
plate mills, 153
steel plant, wartime expansion, 150
survey of developments in basic open-hearth practice, 151
Carnegie Institute of Technology, investigations on properties of cast steel, 282
Carnegie Research Scholarship :
awarded to G. L. Evans, 421
awarded to R. Guenot, 421
Cartridge Cases, steel, manufacture by cold extrusion, 270
Case School of Applied Science, investigations on properties of cast steel, 282
Cast Iron :
acicular, composition, production, and properties, 152
carbon pick-up during melting, 152

wire-, control of electrical equipment, 271
Drill Bits, tungsten-carbide-tipped, behaviour, 392
Drill Steel, for hollow drills, production in Australia, 151
Drop-Forging Practice, Germany, 271
Dropping Test, Brenner, for thickness measurement of cadmium and zinc coatings on steel, 275
Drying, industrial, developments in infra-red heating, 530
Ductility :
electrodeposited chromium coatings on mild steel, estimation, 154
metals under stress and strain, 154
steels for welded structures, 410
Dumez Recorders, chronographic, for use with Chevenard differential dilatometers, 155
Dupont Process, sodium-hydride method of scale removal, 274
Durham, coking coal, survey and classification, 391
Durr Spark Generator, comparison with Feussner generator, 541
Dust :
in gases, determination, use of electrostatic precipitator, 158
in paint and varnish shops, prevention, 277
Dutch State Mines, fine-shale system of coal cleaning, 393
Dwight Sintering Plant, 265

Ebbw Vale Metallurgical Society, notices, 144, 262

Economics :
blast-furnace practice, 395
electric power for iron and steel plants, British Zone, Germany, 414
iron and steel industry, 159, 413
Etco-Ajax-Hultgren Salt-Bath Furnaces, 270
Elastic Constants, refractory materials, determination by Bhagavantam-Bhimasenachar method, 148
Elastic Deformation :
material under combined stresses, theory, 536
wire, measurement, use of Hounsfield extensometer, 155
Elastic Modulus, as fraction of lattice strength of crystals, 412
Elastic Properties, metals, estimation by resonant-pendulum method, 408
Elasticity :
cast and wrought steels, effect of aluminium additions and chemical composition, 538
Elasticity :
photo-, application in stress analysis, 278
rails, equipment for comparison, 534
Electric Cables, steel sheathing, Hackethal process, 402
Electric Control Gear, for rolling-mill auxiliaries, 357 (*Paper*)
Electric Cookers, rust-proofing, mass-production methods, 275
Electric Cranes, installation and operation, 272
Electric Current, for plating processes, methods of reversing, 275
Electric Driving :
continuous pickling plant, 153
rolling mills, equipment and operation, 153
slabbing and strip mills, 153
Electric Furnace Process, basic-arc, slag diffusion, 529
Electric Furnaces :
heating rates for mild-steel bars, 531
high-frequency, types and applications, 532
for production of ferrochromium, 267
use of oxygen, 150
vacuum, for steel production, 267
Electric Motors, rolling-mill, dimensions and ratings, 400
Electric Power, for iron and steel plants, British Zone, Germany, economics, 414
Electric Steel :
production in America, 397
production in France, statistics, 159
properties, determination of effect of elements, 408
for tubes, properties, 539
Electric-Steel Sheets, for production of laminations, use of rubber dies, 533
Electrical Appliances, domestic, phosphatizing and surface-cleaning, 406
Electrical Components, manufacture by powder metallurgy, 407
Electrical Equipment :
manufacture, arc-welding non-magnetic materials between mild-steel plates, 272
Sendzimir strip mill, 400
for wire-drawing machines, control, 271
Electrical Machinery, in iron and steel plants, maintenance, 510 (*Paper*)
Electrode Coatings, welding, effect of composition on transfer of metal, 401
Electrodeposited Coatings :
adhesion and porosity, 539
chromium, on mild steel, estimation of ductility, 154
chromium and nickel compared, 275
determination of thickness, 405
examination by X-ray diffraction, 404
industrial uses, 287
metallographic examination, 284
Electrodeposition :
brass on strip, 153
bright-metal coatings, 275
cadmium and chromium on metals, hydrogen embrittlement, 275
chromium, from solutions containing complex ions, 275
cobalt–tungsten alloys on steel, 406
developments in England, 404
metals, 404
metals, effect of base metal, 404
nickel, on cast iron and steel, 275
nickel, for repair of boiler-fan shafts, 405
principles, 275
for production of bearing surfaces of bearings, 275
thick nickel coatings, 405
tungsten alloys, 406
wartime research, 404
zinc on strip, 153
Electrode-Potential Measurements, temper-brittle steel, 169 (*Paper*)
Electrodes :
welding, austenitic, for welding dissimilar metals, 402
welding, classification, characteristics, and applications, 403
welding, covered type, applications in Germany, 402
welding, design and maintenance, 403
welding, effect on cracking of mild-steel weld metal, 154
Electrographic Methods, of analysis, 543
Electrolytic Method :
determination of silica inclusions in steel, 542
for removal of rust from metals, 274
stripping copper from base metals, 405
Electrolytic Phosphatizing, 277
Electrolytic Polishing, 208, 274, 275, 284, 404, 411
equipment and methods, Germany, 275
use of fluosulphonic acid, 274
Electromagnetic Pumping, liquid metals, 415
Electron Beams, application to metallurgical research, 411
Electron Diffraction :
for determination of composition of electrolytically cleaned steel surfaces, 405
for study of electrolytically polished surfaces, 411
for study of surface structure of metals, 284
Electron Microscopes, 283
Electronic Circuit, Capacitrol, application to temperature control and recording instruments, 266
Electronic Control :
applications to iron and steel industry, 497 (*Paper*)
devices for induction-hardening equipment, 532
Electronic Extensometers, recording, design and applications, 155
Electronic Frequency-Changing Equipment, for induction-melting furnaces, 267
Electronic Instruments, for measurements in cathodic protection, 540
Electronic Treatment, boiler feed-water, for scale prevention, 414
Electro-Physics, welding arcs, 154
Electroplating :
equipment and methods, Germany, 275
methods for reversing current, 275
Electroplating Baths :
voltage calculation, 274
Westalite selenium-compound rectifiers for, 274
Electroplating Chemicals, toxicity, 275
Electroplating Liquors, waste, disposal, effect of U.S. stream-pollution legislation, 405
Electroplating Processes, theory of polarization, 405
Electroplating Shops, reconstruction, 275
Electroplating Solutions :
equipment for analysis and control, 274, 275
impurities, methods of determination, 543
sources of impurities, 404
Electrostatic Precipitator, for determination of dust content of gases, 158
Electrothermic Refining, ferromanganese, 529
Electrotinning :
alkaline process, 405
high-speed equipment for wide strip, 405
Elektrowerk Weisweiler, electric furnaces and process for production of ferrochromium, 267
Elongation, steel, 278
Embrittlement :
hydrogen, during electrodeposition of cadmium and chromium, 275
hydrogen, stainless-steel wire, 273, 274
pickling, carbon steel, 408
strain-age, steel, 280
welded steel plates, 408
Enamel :
ground-coat, on cast iron, effect of firing treatment, 276
titanium, acid-resistant, development, 277
Enamel Coatings, porcelain-, on sheets, factors affecting chipping, 277
Enamelling, vitreous-, practice in German hollow-ware industry, 277

Graphite Structure, nodular, production in cast iron and iron–nickel–carbon alloys, 306 (*Paper*).
Graphitization, steel at high temperatures, 538
Grating Spectrographs, comparison with Littrow prismatic, 158
Gratings, for cooling-water intakes, machine for cleaning, 154
Greases :
analysis, 401
analysis, Sinclair method, 401
determination of oil content, 401
determination of soap content, General Electric Co. and Swan-Finch control methods, 401
determination of sodium soap content, 401
Great Lakes Steel Corporation, boiler maintenance, 272
Greenawalt Sintering Plant, 265
Greninger-Troiano Metallographic Technique, for study of austenite–martensite transformations in carbon and nickel steels, 156
Grey-Iron Castings. *See* Castings, grey-iron.
Grinding :
effect on properties of hardened steel parts, 540
minerals, 392
Grinding Machines :
construction, use of special French steels, 287
for surfaces of stainless-steel slabs, 153, 154
Grooves, for welds, oxy-acetylene cutting, 533
Gudgeon Pins, carburizing and hardening, gas-fired furnaces, 399
Gun Barrels :
centrifugally cast, German, metallurgical examination, 285
seamless, relationship between ingot factors and occurrence of defects, 282
Gun Parts, manufacture, applications of oxy-acetylene cutting, Canadian technique, 533

HH Alloys, properties, 537
Hackethal Process, steel sheathing of electric cables, 402
Hadfield Medal :
awarded to J. H. Chesters, 420
awarded to A. Preece, 522
Hammers :
die, determination of strength of blow, 271
forging, lubricants and lubrication systems, 533
Hardenability :
boron steel, effect of carbon, 530
cast steel, quenching rate relationship, 280
principles, 536
shallow-hardening steels, quenching test for determination, 279
steel, 210
Hardenability Bands :
for alloy steels, 536
for steels, 409
Hardenability Tests, Jominy and Shepherd, use in determination of weldability of steels, 279
Hardening :
cold-work, stainless steels, 155
crankshafts, use of induction heating, 269
depth of, in tool steel, determination, 279
flame-, armour plates, 532
flame-, cast iron and steel, effect of microstructure, 284
flame-, quenching operations, use of water-soluble oils, 270

Hardening—*continued.*
flame-, steel, 399
flame- and high-frequency, modern methods, 269
gear teeth, methods, 531
gudgeon pins, gas-fired furnaces, 399
induction, equipment, electronic control devices, 532
induction, equipment for long bars and blades, 532
induction, grey cast-iron cylinder liners, 532
induction, Meehanite, 532
induction, steel, 532
stainless steel, theory and practice, 270
steel, study of Davenport and Bain's curves, 270
steel, theory and practice, 270
surface-, steel parts, use of high-frequency induction heating, 269
tool steels, theory and practice, 270
Hardness :
effect on failure of electroplated lockwashers, 282
effect on machinability, 273
Knoop, factors affecting measurement, 280
Hardness Numbers, Knoop, calculation independent of load, 279
Hardness-Testing Machines :
diamond-pyramid type, 409
micro-, L.C. Microsclerometer, 279
micro-sclerometer, 409
Hardness Tests :
alloys and metals at high temperatures, 280
carbon steels, 270
induction-heated steels, 538
micrographic constituents, use of L. C. Microsclerometer, 279
Rockwell and Vickers compared, 536
theory, 536
Heat :
consumption in heat-treatment operations, 400
losses through furnace walls, measurement and methods of reduction, 530
research, principles of heat and mass flow analyser, 392
Heat Data, for iron and steel plants, 288 (*Book*)
Heat-Exchangers, corrosion during removal of ferric oxide deposits by acid, 156
Heat and Mass Flow Analyser, principles, use in heat research, 392
Heat-Resistant Alloys :
HH and HT types, properties, 281, 537
for gas turbines, creep and stress fracture, 280, 281
for gas turbines, properties and tests, 281
stress-fracture tests, use in study of structure variations, 156
Heat-Resistant Steel :
austenitic, machining, 273
use in manufacture of gas-turbine blades, German practice, 287
Heat Transfer, 414
at high pressures, factors affecting, 415
in hot fluids, 150
Heat-Treatment, 268, 399, 530
alloy steel, effect on quench cracking, 268
bainitic, for high-speed steel tools, 269
ball-bearing race rings, 269
bearings, salt-bath equipment, 399
effect on properties of structural steels, 282
effect on structure of austenitic manganese steel, X-ray diffraction examination, 284
effect on tempered chromium–silicon spring steel, 399
equipment for automobile and lawn-mower parts, 532
heat consumption, 400
high-grade iron castings, to avoid scrapping, 530
homogenization, effect on properties of cast steel, 532
industrial, 269
modern equipment, 269
processes, 399
rimming-steel sheets for stamping, 531
spot welds in steel plates, 531
steel, in non-decarburizing atmospheres, 399
sub-zero, applications, 533
use of controlled atmospheres, 531
vacuum, process and control, 531
wire, immersed-electrode salt baths, 399
Heat-Treatment Furnaces, 268, 399, 530
developments in protective atmospheres for, 269
forced-atmosphere-circulation type, 269
gas-fired, for carburizing and hardening gudgeon pins, 399
gas-fired, thermal control, 268
for hollow chromium–molybdenum–nickel steel aircraft propeller blades, 269
Heater, air, direct-fired, redesign and performance, 414
Heating :
dielectric, principles (*with bibliography*), 415
high-frequency, applications, 269
induction, equipment, chart for selection, 269
induction, for hardening crankshafts, 269
induction, high-frequency, equipment and processes for small parts, 532
induction, high-frequency, use in surface-hardening of steel parts, 269

Heating—*continued.*
induction, for soldering, 269
infra-red, for industrial drying, developments, 530
in lost-wax precision casting, control, 268
slabs, furnaces for, control equipment, 530
Heating Equipment :
electric, types and principles, 531
induction-, for tools, 399
Heating Rates, mild-steel bars in electric furnaces, 531
Heating Temperatures, initial, effect on properties of air-hardening steel, 154
Heavy-Liquid System, coal cleaning, 392
Helium, applications in welding of metals, United Kingdom and American practice, 402

throwing power, measurement, 274
Plating Chemicals, electro-, toxicity, 275
Plating Liquors, waste, treatment, 404
Plating Machines, metal-, high-speed, 404
Plating Processes, bright-, 275
Plating Range, chromic acid baths, determination, 405
Plating Shops, electro-, reconstruction, 275
Plating Solutions :
electro-, equipment for analysis and control, 274, 275
purification, effect of impurities (*with bibliography*), 405
Pneumatic Equipment, types, 160 (*Book*)
Pneumatic Separators, for coal and ore, Birtley type, 266
Pneumatic Tools, for metallurgical industries, 401
Poisson's Ratio, measurement by X-ray diffraction, 155
Poland, iron and steel industry, reconstruction, 413
Polarization, in electroplating processes, theory, 405
Polarographic Analysis, comparison, with colorimetric, potentiometric, and spectrum methods, 541
Polishing :
electrolytic, 208, 274, 275, 284, 404, 411
electrolytic, equipment and methods, Germany, 275
electrolytic, use of fluosulphonic acid, 274
metals, mechanical methods, 404
small parts, in drums and bells, 274
Porosity :
electrodeposited coatings, 539
refractory materials, determination, 394
Potentiometric Analysis, comparison with colorimetric, polarographic, and spectrum methods, 541
Potentiometric Method, for determination of cobalt in steel, 157
Pouring, effect on formation of cracks in rails, 280
Powder Lines, Debye-Scherrer, intensity relations, 284
Powder Metallurgy, 277, 407, 534
applications in development of temperature- and wear-resistant alloys and metals, 407
application in manufacture of shell-rotating bands, German practice, 277
definitions and terms, 534
developments (*with bibliography*), 407
developments, applications, and advantages, 277
manufacture of bearings, 407, 534
manufacture of electrical components, 407
manufacture of steel-backed copper–lead bearings for internal-combustion engines, 407
manufacture of structural parts, costing, 407
mechanism of packing, 277
production of gas-turbine blades and jet-engine parts, 534
production and properties of alloys, 534
production and properties of metals, effect of additions of non-metallic powders, 534
solubility law, 408
theory, 407
Powdered Alloys, iron–carbon, production and transformation, 278
Powdered Iron :
packing density, effect of particle-size ratio, 277
production, methods, 534
sintering in hydrogen, determination of carbon, oxygen, and sulphur losses, 277
sintering in hydrogen, effect of temperature on reduction of carbon, oxygen, and sulphur, 534
Powdered-Iron Parts :
for oil pumps, manufacture, 407
production, costing calculations, 407
structure and properties, 534
Powdered-Iron Products, engineering properties, evaluation from test specimens, 279
Powdered-Metal Filters, production and developments, 534
Powdered-Metal Parts, design, 407
Powdered Stainless Steel, compacting, sintering, and applications, 407
Powdered-Steel Compacts, sintered, liquid carburizing, 399
Powders :
carbonyl iron and carbonyl nickel, properties and manufacture in Germany, 407
ferromagnetic, sintered, variation of coercive field as function of density, 537
metal, instrument for classification, 407
metal, pressing and sintering, 277
metal, sintering, protective atmospheres for, apparatus for testing, 407
metal, use as pigments in paints, 407
non-metallic, effect on properties of metals produced by powder metallurgy, 534
Power :
calculation of requirements, Mannesman tube-rolling process, 400
electric, for iron and steel plants, British Zone, Germany, economics, 414
Power Laws, use in stress analysis beyond elastic range, 535
Power Plants :
for steelworks, load-control system, 272
developments, 401
Precious-Metal Coatings, electrodeposited, industrial uses, 287
Precipitator, electrostatic, for determination of dust content of gases, 158
Preheating, effect on fuel consumption, 527
Press Dies, chromium–manganese–tungsten steel, martempering, modified process, 532
Presses, forging, lubricants and lubrication systems, 533
Pressing :
bath tubs, 271
effect of pickling on wasters, 274
metal powders, 277
operations and practice, 533
Pressure Drop, gases, through packed tubes, 415
Pressure Vessels :
laminar construction, design, manufacture, and testing, 287
welded, stress-relieving, 400
welded, X-ray equipment for examination, 283

Pressures :
high, effect of hydrogen on metals, 281
high, heat transfer, factors affecting, 415
Prismatic Microscopes, improvements in design, 411
Process Control, mines and concentration plants, 392
Producer Gas, factors affecting quality, 148, 456
Producers :
fuel beds, flow of gas through, 456
fuel distribution, 456
fuels for, properties, 393
Koppers-Totzek type, theory and operation, 393
mechanically operated low temperature type, 148
thermal efficiency, 148
Propeller Blades, aircraft, hollow chromium–molybdenum–nickel steel, heat-treatment furnaces, 269
Protection Process, for tinning, 276
Pulverized Coal. *See* Coal, pulverized
Pulverized Fuel. *See* Fuel, pulverized
Pulverizers, for coal, design and development, 401
Pumping, electromagnetic, liquid metals, 415
Pyrenees, iron-ore deposits, 391
Pyrite. *See* Refractory Materials
Pyrometers :
lead sulphide, use for determination of surface temperature of railway tyres and brake blocks, 266
optical and thermo-electric types, 266
photo-electric, for measurement of open-hearth furnace roof temperatures, 341
Pyrometry, optical, 281

Quality :
arc welds in structural steel, effect of red-lead and zinc-chromate paints, 402
chromium–molybdenum–nickel steel, effect of sulphur inclusions, 281
coke, effect of changes on cupola practice, 148
coke, effect on combustion reactions in cupolas, 152
producer gas, factors affecting, 148, 456
Quality Control :
in metallurgy, use of ultrasonics, 537
welding, 403
Quartzite. *See* Refractory Materials
Quench Cracking, alloy steel, effect of chemical composition and heat-treatment, 268
Quenching :
bars and billets, direct method, 531
in flame-hardening operations, use of water-soluble oils, 270
gas-fired salt bath for, 270
interrupted, 400
isothermal, principles, 270
steels, media and methods, 270
Quenching Rate, cast steel, hardenability relationship, 280
Quenching Tests, for determination of hardenability of shallow-hardening steels, 279

Radex E Refractories, for open-hearth ports and roofs, behaviour, 148
Radiations, suppression, use of ceramic coatings at high temperatures, 276
Radiographic Standards, for steel castings, American Society for Testing Materials, 137
Radiography :
equipment, theory and industrial applications (*with bibliography*), 543 (*Book*)
micro-, applications in study of inclusions and segregations in steel, 185 (*Paper*)
micro-, technique, 537
Rails :
elasticity, equipment for comparison, 534
formation of cracks, effect of pouring and rolling conditions, 280
manufacture and testing, developments, 153
Railway Bogies, materials and manufacture, 267
Railway Brake Blocks, determination of surface temperature, use of lead sulphide pyrometer, 266
Railway Coaches :
construction, applications of welding, French practice, 402
stainless-steel, construction, applications of resistance welding, 403
Railway Tyres, determination of surface temperature, use of lead sulphide pyrometer, 266
Rams, for coke ovens, safety device for alignment, 393
Reactivity :
solid fuels, determination, 392
solids, factors affecting, 407
Reboiler, for oil refinery, welded, caustic cracking, 287
Recorders, Dumez chronographic, for use with Chevenard differential dilatometer, 155
Recording Instruments, temperature-, application of electronic Capacitrol circuit, 266
Recrystallization :
chromium–nickel austenite, 285
primary and secondary, 412
Rectification, neutral salt baths, Neutra-Gas process, 270
Rectifiers, Westalite selenium-compound type, for electroplating baths, 274
Recuperators, use and advantages for coke ovens and gas retorts, 392
Red-Lead Paints, effect on quality of arc welds in structural steel, 402
Reduction :
iron oxides by carbon monoxide and hydrogen, apparatus and methods, 395
pig iron, use of calcium carbide, theory, 395
Refractory Materials, 148, 394
for all-basic furnace roofs, developments, 394
basic, types used in France, behaviour, 149
basic, use in open-hearth furnaces, developments, 529
German industry, 148
high-temperature, properties and manufacture, 394
manufacture and uses, American practice, 394
for open-hearth furnaces, properties and testing, 149
porosity, determination, 394
properties, characteristics, and behaviour, 394
special types for metal-melting furnaces, properties, 394
Refractory Materials (Chrome-Magnesite Bricks), Radex E type, for open-hearth ports and roofs, behaviour, 148
Refractory Materials (Chromite), elastic constant, determination by Bhagavantam-Bhimasenachar method, 148
Refractory Materials (Dolomite), stabilized, manufacture and use, 394
Refractory Materials (Fireclay) :
physical changes during re-pressing, 394
plastic, workability index, determination, 394
Refractory Materials (Magnesite) :
for ladle linings, 394
spalling resistance, 148, 149
Refractory Materials (Magnesite Bricks), X-ray analysis, 148
Refractory Materials (Magnetite), elastic constant, determination by Bhagavantam-Bhimasenachar method, 148
Refractory Materials (Pyrite), elastic constant, determination by Bhagavantam-Bhimasenachar method, 148
Refractory Materials (Quartzite), structure, composition, and properties, 148
Refractory Materials (Silica Bricks), for coke-ovens, permeability, 394
Regalvanizing, welded joints, 406
Regenerators, use and advantages for coke ovens and gas retorts, 392
Reheating Furnaces, atmospheres, effect on hydrogen absorption and evolution in steel, 530
Repair :
castings, mechanical method, 268
fractured helical mill pinion, 273
grey-iron castings by welding, 273
Replicas, plastic, for measurement of surface finish, 138
Republic Steel Corporation, gas-fired annealing furnaces for stainless-steel bars and tubes, 270
Research :
anti-fouling paints for ships' hulls, 406
applications of ultrasonics, Siemens-Schuckertwerke, 415
arc welding, 402
corrosion, 286
electrodeposition, wartime work, 404
formation of surface films on stainless steels, report, office of Naval Research, 541
heat, principles of heat and mass flow analyser, 392
iron production, 149
machinability, survey of German wartime work, 273
metallography and properties of rolled threads in steel, Great Britain and Switzerland, 539
properties of cast steel, 282
steel production since 1870, 413
Resin :
Catalin 800 and Glyptal types, properties, 278
phenol-formaldehyde, properties and uses, 268
Resolution, microscopes, determination of limit, 283
Resonant-Pendulum Method, estimation of coefficient of rigidity and elastic properties of metals, 408
Reversing Valves, for open-hearth furnaces, developments in design, 529
Rhodesia, ferrochromium and steel production, projected scheme, 414
Ridley-Scholes Process, cleaning coal, 147, 393
Rigidity, metals, estimation of coefficient, by resonant-pendulum method, 408
Rimming Steel, liquation of oxygen, 285
Rimming-Steel Sheets :
cold-reduced, metallurgy, 397
for stamping, heat-treatment, 531
Ring, cast-iron, 2500 years old, historical note, 287, 413
Ring Gears, manufacture from hot-rolled steel bar, 271

Rings, ball-bearing race, heat-treatment, 269
Risers, method of removal from castings, 268
Road-Making Materials, manufacture, use of blast-furnace slag, German practice, 528
Rockwell Hardness Tests, comparison with Vickers, 536
Rod Mills, 401
Colvilles, Ltd., 254 (*Paper*)
Richard Johnson and Nephew, modernization, 159
Rohrenwerke, works for manufacture of heavy plant, tubes, and tyres, 533
Rolled Threads, in steel, metallography and properties, research in Great Britain and Switzerland, 539
Roller Conveyors, cast-iron gravity type, for foundries, production, 398
Rolling :
cold-, effect on structure of austenitic manganese steel, X-ray diffraction examination, 284
cold- and hot-, strip, developments in technique, 153
effect on formation of cracks in rails, 280
metals, theory and practice, 400
tubes, Mannesmann process, calculation of power requirements, 400
Rolling Loads, computation, 153
Rolling-Mill Auxiliaries :
electric control gear, 357 (*Paper*)
mechanical and electrical features, 376
Rolling-Mill Bearings :
materials for, types and behaviour, 400
metal, synthetic resin, and wood, comparison, 400
Rolling-Mill-Motors, dimensions and ratings, 400
Rolling-Mill Plants :
cold-reduction, Steel Co. of Wales, Ltd., 191
light-section, Darlington and Simpson Rolling Mills, Ltd., 400
Rolling-Mill Practice, 153, 400
Rolling-Mill Processes, 400
Rolling-Mill Stands, design calculations, 400
Rolling-Mill Variables, cold-, effect on carbon steel, 282
Rolling Mills :
combined blooming, rail and structural type, design, 400
electric driving and operation of mechanical equipment, 153
light-section, Darlington and Simpson Rolling Mills, Ltd., 153
reconditioning rolls, 153
semi-finishing type, design, 400
small, American types, 153
small, modern types, 249
Rolls :
deflection and dressing, formulae, 153, 400
reconditioning, 153
tungsten carbide, for flattening wire, developments, 153
Ropes :
mine hoist, examination, use of Cyclograph magnetic flaw detector 282
winding, stress calculations, 409
Rotary Furnaces, oil-fired, for production of carbon steel and high-duty iron, 397
Rotating Bands, for shells, manufacture by powder metallurgy, German practice, 277
Roughness, surface, castings, measurement by Hobman-Mechanite Surface Meter, 410
Rubber, bonding to metals, 414, 415
Rubber Dies, use in production of laminations from electric-steel sheets, 533
Rubber Linings, use in corrosive-liquor containers, 405
Ruhrstahl, A.G., quenching of bars and billets, direct method, 531
Russia :
foundry industry, expansion, 414
iron and steel industry, developments and reconstruction, 414, 529
tool steel, standardization, 412
Rust, removal from metals, electrolytic method, 274
Rust Preventive Compounds, 277
Rust Proofing, electric cookers, mass-production methods, 275

S.A.E. Steel, chromium–molybdenum, examination and testing, 409
Sachs, works for manufacture of heavy plant, tubes, and tyres, 533
Safety Device, for alignment of coke-oven rams and coke guides, 393
St. Jacques Burner, for pulverized fuel, 393
Salt Baths :
electric, 270
electric, for annealing coils, 531
gas-fired, for quenching, 270
for heat-treatment of bearings, 399
immersed-electrode, for heat-treatment of wire, 399
neutral rectification, Neutra-Gas process, 270
for nitriding high-speed steel tools, 399
Upton electric, operation, 268
Salt Solutions :
corrosion of iron, effect of temperature, use of Evans cell, 540
corrosion of iron, protection by galvanic contact with zinc, 286
corrosion of metals, 286
Salter, George and Co., Ltd., manufacture of coiled springs, 271
Sand-Blasting :
equipment and practice, 274
history and development of process, 404
Sandstone Strata, natural-gas, exhausted, use in storage of coke-oven gas, 393
Scale :
in boilers, prevention, electronic treatment of feed-water, 414
causes, nature, and properties, 286
removal, Dupont sodium-hydride process, 274
removal from steel-plant equipment, use of chemical solvents, 149
Scarfing, ingots, oxy-acetylene powder method, 533
Schenck (Carl) Maschinenfabrik, fatigue-testing machines, 152
Schofield-Grace Thermocouple, quick immersion, construction and use, 266
Schwingmetall Process, for elimination of vibration in machinery, 159
Science and Industry, news, 145, 262, 389, 524
Scrap :
determination of type, use of mobile laboratory, 158
effect of non-ferrous metals mechanically attached, 151
methods for removal of brass, copper, and zinc coatings, 274
shortage, effect on American iron and steel industry, 265
Screen Analysis, moulding sand, 398
Screening Machines, construction, use of special French steels, 287
Sealing, porous castings, use of sodium silicate, 530
Sea-Mist Corrosion, apparatus for testing, 157
Segregation :
macro-, in alloy steel ingots, 540
in centrifugally cast steel tubes, 284
in high-speed chromium–tungsten–vanadium steel ingots, 285
in ingots, relationship to Bauman sulphur print, 411
in steel, study by microradiography, 185 (*Paper*)
Selenium, effect on properties of cast iron and steel, 411
Selenium-Compound Rectifiers, Westalite type, for electroplating baths, 274
Sendzimir Mills, electrical equipment, 400
Service Tests, anti-fouling compositions, 277
Servo Electronic Controls, applications in iron and steel industry 497 (*Paper*)
Shake-Outs, mechanical, economics, 268
Shaping, metals, 533
Sheet Mills, cold, for high-silicon steel sheets, 401
Sheets :
annealing, batch and continuous methods compared, 532
copper-plating, 276
electric-steel, for production of laminations, use of rubber dies, 533
porcelain enamel coatings on, factors affecting chipping, 277
production and use, significance of physics, 538
rimming-steel, cold-reduced, metallurgy, 397
rimming-steel, for stamping, heat-treatment, 531
Shell-Rotating Bands, manufacture by powder metallurgy, German practice, 277
Shelton Iron, Steel and Coal Co., Ltd., model blast-furnace plant, 149
Shepherd Hardenability Tests, use in determination of weldability of steels, 279
Ship Castings, methods for prevention of defects, 151
Ships, painting, practice in New York Naval Shipyard, 277
Ships' Hulls, anti-corrosive and anti-fouling paints for, 406
Shot-Blasting :
history and development of process, 404
practice, 274
Shot-Peening, for increasing fatigue life of metal parts, 536
Shot-Peening Machines, operation and control, 536
Shrinkage :
in welded aircraft construction, 272
welded joints, 154
Shunting Locomotives, Diesel, for steel plants, maintenance, 154
Siemens-Schuckertwerke, ultrasonics, research on applications, 415
Sigma Phase :
formation in chromium–molybdenum–nickel corrosion-resistant steels, 289 (*Paper*)
formation and effect in chromium–molybdenum–nickel–titanium steel, 295 (*Paper*)
Sikfors Bruk Plant, for carbonization of wood, 393
Silica, inclusions in steel, determination, electrolytic method, 542
Silica Bricks. *See* Refractory Materials
Silica Tubes, for laboratories, manufacture, 394
Silicon :
behaviour and effect in acid electric furnace practice, 267
detection in steel by spot tests, 157
diffusion into steel surfaces, German practice, 406
effect on properties of cast iron and steel, 408, 411
effect on properties and weldability of carbon and carbon-molybdenum steels, 540
in solid solution, effect on fatigue strength of ferrite, 539

Silicon Carbide, use in ladle-deoxidation of steel, 151
Silicone Lubricants, for ball bearings, properties and characteristics, 401
Silver-Brazing, cast iron, Kolene process, 273
Silver Coatings, bright-, production by electrodeposition, 275
Silver-Soldering, stainless-steel kitchen utensils, 273
Sinclair Method, grease analysis, 401
Sintered Carbide Dies, types and applications, 533
Sintered Carbides, for dies and cutting tools, preparation, metallography, and applications, 412
Sintering :
iron ores, 265, 266
metal powders, 277
metal powders, protective atmospheres for, apparatus for testing, 407
powdered iron in hydrogen, determination of carbon, oxygen, and sulphur losses, 277
powdered iron in hydrogen, effect of temperature on reduction of carbon, oxygen, and sulphur, 534
stainless-steel powder, 407
Sintering Plants, Dwight and Greenawalt types, 265
Size, changes in chromium steel during sub-zero treatment, 280, 282
Skoda Works, reconstruction, 414
Slabbing Mills, electric driving, 153
Slabs :
furnaces for heating, control equipment, 530
stainless-steel, machine for grinding surface, 153, 154
Slag :
basic, mineralogy, 397
blast-furnace, composition, 149
blast-furnace, use in manufacture of building materials, 528
blast-furnace, use in manufacture of cement, plaster, road-making materials, and slag-wool, German practice, 528
diffusion in basic-arc furnace process, 529
steelmaking, constitution, properties, and control, 397
temperature, relationship with pig-iron composition in blast-furnace process, 149
treatment and use, 528
use in manufacture of fertilizers, German practice, 528
welding, apparatus for determination of viscosity, 154
Slag–Metal Reactions, acid open-hearth process, effect of carbon, 397
Slag-Wool, manufacture, use of blast-furnace slag, German practice, 528
Sleeve Valves, nitrided, for internal-combustion engines, 271
Sludge, removal from steel-plant equipment, use of chemical solvents, 149
Smelting :
ilmenite, German practice, 266
Japanese iron–chromium–nickel ore, 528
Soaking Pits, types and operation, 125 (*Paper*), 530
Soap :
in lubricating greases, determination, General Electric Co. and Swan-Finch control methods, 401
sodium, in greases, determination, 401
Société de Denain et d'Anzin, production of special steels, 538
Société Minerais et Métaux, Paris, ore-testing laboratories, 265
Société Stainless, production of special steels, 538
Society of Automobile Engineers :
causes of wear in diesel-engine cylinders, 283
steel specifications, details and alterations, 281
Sodium-Hydride Process, Dupont, for scale removal, 274
Sodium Silicate, use in sealing porous castings, 530
Sodium Soap, in greases, determination, 401
Sodium Sulphite, use for improving machinability of carbon steel, 150
Soldering :
silver-, stainless-steel kitchen utensils, 273
use of induction heating, 269
Soldering Alloys, composition and properties, 273
Solidification :
grey-iron castings, effect of convection currents, 151
ingots, mechanism, 267
Solids :
brittle, mechanism of fracture, 538
reactivity, factors affecting, 407
Solubility Law, in powder metallurgy, 408
Solutions :
copper sulphate-oxalate, for copper-plating of steel, 276
electroplating, equipment for analysis and control, 274, 275
electroplating, impurities, methods of determination, 543
electroplating, sources of impurities, 404
plating, purification, effect of impurities (*with bibliography*), 405
salt, corrosion of iron, effect of temperature, use of Evans cell, 540
salt, corrosion of iron, protection by galvanic contact with zinc, 286
salt, corrosion of metals, 286

Steam Engineering, metallurgical developments, 414
Steam-Oxygen Blast, for production of water-gas 393
Steam Plants :
for steelworks, economics of operating at high pressures, 272
use of low-grade fuel, 392
Steel :
air-hardening, effect of initial heating temperature, 154
alloy, acicular structure within intermediate transformation range, 539
alloy, as-cast austenitic grain size, measurement, 412
alloy, corrosion-resistant, properties, 540
alloy, determination of distribution of nitrogen and oxygen in ingots, vacuum-fusion method, 540
alloy, determination of molybdenum, colorimetric method, 542
alloy, for gas turbines, developments, 538
alloy, hardenability bands, 536
alloy, high-quality, economics, 287
alloy, macrosegregation in ingots, 540
alloy, production in side-blown converters, 398
alloy, quench cracking, effect of chemical composition and heat-treatment, 268
alloy, resistance welding, 403
alloy, welded, cracking, effect of hydrogen, 154
alloy (high), composition and characteristics, 538
alloy (high), cutting, oxy-acetylene powder method, 533
alloy (high), tempering, 270
alloy (low), austenitic and ferritic welds in, macro-etching and photographing, 411
alloy (low), composition and characteristics, 538
alloy (low), spectrum analysis, 158
analysis, use of mobile laboratory, Ford Motor Co., 158
annealed, factors affecting pearlitic microstructure, 283
in as-cast and as-forged conditions, comparison of austenitic grain growth, 285
atmospheric corrosion tests on protective paint coatings in Belgium, 157
cadmium and zinc coatings on, thickness measurement, use of Brenner dropping test, 275
carburization, sulphide penetration, 270
cast. *See* Cast Steel
cathodic protection, use of magnesium anodes, 286
centrifugal casting, 268
chromate-passivated sprayed-zinc coatings on, corrosion resistance, 276
chromium-plated, fatigue limit, effect of plating variables, 535
clad, production and applications, 275
cleaning, oxy-acetylene flame method, 404
for construction of high-pressure systems, types, 412
copper-plating, use of copper sulphate-oxalate solutions, 276
corrosion resistance, comparison with cast iron, 157
corrosion resistance, effect of carbide structure, 157
corrosion-resistant, formation of sigma phase, 289 (*Paper*)
for cutlery manufacture, French practice, 282
damping capacity, 411
deposition of nickel by chemical method, 404
desulphurization, 151
detection of flaws, non-destructive methods, 537
determination of aluminium by spectrum analysis, 541
determination of chromium and manganese, 543
determination of silica inclusions, electrolytic method, 542
die, developments in production, 150
effect of boron, 538
effect of hydrogen, 437
electric. *See* Electric Steel
electrodeposition of heavy nickel coatings, 275
electrodeposition of tungsten–cobalt alloys on, 406
elongation, 278
finishing processes, 404
flame-hardening, 399
fluidity, 448
fluidity, determination by Gabino spiral test, 408
fluidity–temperature relationships, 280
gaseous carburizing, 399
graphitization at high temperatures, 538
hard-chromium coatings on, study by X-ray diffraction, 284
hardenability, 210
hardenability bands, 409
Steel—*continued.*
hardenable, welding, 272
hardening, study of Davenport and Bain's curves, 270
hardening, theory and practice, 270
heat-resistant, austenitic, machining, 273
heat-resistant, use in manufacture of gas-turbine blades, German practice, 287
heat-treatment, in non-decarburizing atmospheres, 399
high-speed, cutting properties, 273
high-speed, production in basic arc furnaces, 151
high-speed, toughness, measurement, use of bend tests, 540
hot-dip zinc coatings, structure, 411
hydrogen absorption and evolution, effect of reheating-furnace atmospheres, 530
hypo-eutectoid, martempering, 270
for hollow drills, production in Australia 151
inclusions and segregations, study by microradiography, 185 (*Paper*)
induction hardening, 532
Japanese specifications, 415
ladle-deoxidation, use of silicon carbide, 151
liquid, deoxidation, vacuum-fusion method, 529
liquid, mechanism of carbon removal, 451
liquid, study of formation of flowers, 281
machinability tests, 536
for magnets, heat-treated in magnetic field, theory of anisotropy, 537
marine-exposure tests on cementiferous-paint coatings, 229 (*Paper*)
measurement of Young's modulus at high temperatures, 155
microstructure, effect on flame-hardening, 284
minute quantities, apparatus for determination of carbon, 541
National Emergency, properties, 282
overheating, 269
overheating, detection by impact-bend tests, 279
painting, preparation and methods, 277
phosphate coatings on, production by modified Bonderizing process, 276
pickling, effect of oxide structure, 274
for pipes, stability at high temperatures, 281
production, 150, 266, 396, 529
production in America, survey, 150, 413
production and development, 413
production, Hermann Göring works, special method, 267
production, graphical correlation of variables, 159
production and metallurgy, 160 (*Book*)
production, Perrin-Ugine process, 151
production, rapid method, Ugine Works, 397
production and research since 1870, 413
production, review of developments, 413
production in Rhodesia, projected scheme, 414
production in Sweden, use of sponge iron, 151
production in vacuum electric furnace, 267
properties, comparison with aluminium and plastics, 539
properties, effect of elements, 411
properties, effect of metallurgical factors, 408
properties, effect of microstructure, 279
properties, effect of variation in composition of cementite, 282
properties and engineering applications, 411
protection, behaviour of non-metallic coatings, 99 (*Paper*)
protection, use of cementiferous paints, 219 (*Paper*)
quenched, tempering, principles, 533
quenching, media and methods, 270
relationship between quantity of residual austenite and cooling rate, 285
rimming, liquation of oxygen, 285
rolled threads, metallography and properties, research in Great Britain and Switzerland, 539
SAE specifications, details and alterations, 281
in salt water, cathodic protection, use of alloys and non-ferrous metals, 157
samples, selection for study of manufacturing processes, 529
shallow-hardening, hardenability, quenching test for determination 279
soldered, cadmium coatings on, causes of blistering, 276
special French types, for construction of crushing, grinding, and screening machines, 287
special types, for gas turbines, developments, 538
special types, present production in France, 538
spectrum analysis, condensed-spark method 157
for springs, properties, 411
stability at high temperatures, 538
strain-age embrittlement, 280
sulphur-bearing, production, 529
supersonic tests, 537
temper-brittle, electrode-potential measurements and micro-examination, 169 (*Paper*)
temper brittleness, 280, 399, 409
temper brittleness, detection by impact-bend tests, 279
temper brittleness, etching reagents for detection, 284
temper brittleness, review (*with bibliography*), 436

Steel—*continued*.
for transformers, Hipersil, magnetic properties, 537
types, constitution, properties, and testing, 544 (*Book*)
types suitable for carburizing and nitriding, 411
for use at high temperatures, 416 (*Book*)

Wire :
absorption and evaporation on surface after acid or electrolytic pickling, 281
bend tests, for detection of defects, 155
developments in manufacture, 272
drawing, back-pull, survey of literature, 271
drawing, lime coatings for, methods of improving efficiency, 533
drawing, theoretical analysis of stresses and strains, 533
drawing, theory. 347 (*Paper*) 533
drawing, use of borax, 272
drawing, use of soap lubricants, 272
elastic and plastic deformation, measurements, use of Hounsfield extensometer, 155
flattening, tungsten carbide rolls for, developments, 153
heat-treatment, immersed-electrode salt baths, 399
phosphatizing before drawing, advantages, 272
stainless-steel, hydrogen embrittlement, 273, 274
Wire-Drawing Dies, profile, method for checking, 496 (*Paper*)
Wire-Drawing Machines :
Aetna continuous non-slip type, 272
control of electrical equipment, 271
design, 533
Wire Industry :
Australia, Czechoslovakia, and Germany, review, 413
developments, 271, 272
world, history and development, 414
Wire Mills, Germany, developments, 1939–45, 533
Wire Rope :
care and maintenance, 287
torsional strength, effect of drawing operations, 272
Wood, carbonization, Sikfors Bruk plant, 393
Woodall-Duckham Becker Coke Ovens, installation, 148
Workability Index, plastic fireclay refractories, 394
World :
chromium resources and production, 392
lead, tin, and zinc resources, 392
molybdenum and vanadium resources, 391
wire industries, history and development, 414
Worn Parts, building-up by metal spraying, 406
Wrapping, corrosion-resistant, for bearings and metal parts, for storage in tropical climates, 541
Wrought Steel, elasticity, effect of aluminium additions and chemical composition, 538

X-Ray Analysis, magnesite bricks, 148
X-Ray Back-Reflection Diagrams, for calculation of lattice dimensions, 284
X-Ray Camera, for determination of crystal-lattice changes, 284
X-Ray Crystallography, equipment, applications, and methods, 284
X-Ray Diffraction :
breadth of lines from martensite, 283
for examination of effects of cold-rolling and heat-treatment on structure of austenitic manganese steel, 284
for examination of electrodeposited coatings, 404
for measurement of Poisson's ratio, 155
for study of hard-chromium coatings on steel, 284
use in classifying solid fuels, 147
X-Ray Equipment :
for examination of welds in pressure vessels, 283
German, wartime developments, 284
high-voltage, 537
high-voltage, for testing castings, 281
stereoscopic, 537
X-Ray Examination :
alloys and metals, methods, 284
anisotropy of metals, 535
applications in iron and steel industry, 284
iron and nickel sulphides, 284
iron–nickel–sulphur system, 284
X-Rays :
application to metallurgical research, 411
for detection of defects, 283
for determination of structure of metals, 538
for flaw detection, 537, 538
industrial applications, 284
for inspection of welded joints in pipes, 272
in stress analysis, developments, 535
for study of deformation and stresses in alloys and metals, 284

Yield, plastic, notched bars under tension, two-dimensional theory, 536
Yield Strength, impact, mild steel, effect of repeated impact, 155
Yielding, anisotropic metals, theory, 535
Young's Modulus :
measurement at high temperatures, 155
temperature variations, 408

Zeiss Spectrograph, Qu 24, luminosity, comparison with Jobin and Yvon Zelande, 541
Zinc :
consumption in hot-dip galvanizing, 405
effect on properties of cast iron and steel, 411
electrodeposition on strip, 153
hard, causes of formation during hot-dip galvanizing, 275
phosphate coatings on, production by modified Bonderizing process, 276
pure, properties and production, 282
world resources, 392
Zinc Alloys, electrolytic polishing, 274
Zinc-Chromate Paints, effect on quality of arc welds in structural steel, 402
Zinc Coatings :
bright-, production by electrodeposition, 275
hot-dip, on steel, structure, 411
methods of removal from iron and steel scrap, 274
sprayed-, chromate-passivated, on steel, corrosion resistance 276
on steel, thickness measurement, use of Brenner dropping test, 275
Zinc Industries, Liège district, historical review, 413
Zinc Plating, detection of cadmium by spot tests, 543
Zinc Surfaces, chemical treatment for increasing corrosion resistance, 276
Zirconium, effect on properties of cast iron and steel, 411
